THE APPLICATION OF TOPOLOGICAL METHOD TO THE ANALYSIS OF WEST CAPITAL PYONGYANGBU MAP

TACKSUN JUNG AND Q-HEUNG CHOI

Abstract. We analyse the map of the west capital Pyongyangbu of Old Korea (AD 920) by topological method and geometrical method and compare it with the map of North Korea Pyongyang. By the analysis of the map we find the real corresponding place of the old map. The analysing and finding the real place of the old map is a very good example of geometry education. Many Koreans had learned and recognized that Old Korea (AD 920) was a small country located in the south part of Ablok river. But, after reading this paper they change their old recognitions and they take prides in Great Old Korea.
